

RADIO COMMUNICATION & EMERGENCY BROADCAST INTERFACE

1. Field Radios

Standard issue radios may experience:

- Signal bleed
- Voice overlap
- Time-offset transmissions

If unknown voices are heard:

- Do not respond
- Log exact phrasing
- Power down for 90 seconds

2. Emergency Broadcast Interface (EBI)

EBI may be activated during:

- Mass anomaly exposure risk
- Civilian clustering
- Visual contagion events

EBI messaging must:

- Remain vague

- Use authoritative tone
- Avoid descriptive detail

3. Unauthorized Broadcasts

In some cases, EBI messages may appear without authorization.

If this occurs:

- Do not acknowledge publicly
- Preserve recordings
- Await directive

4. Baton Rouge Advisory (1983)

Regional testing has shown:

- Increased effectiveness during dusk hours
- Higher compliance near water-adjacent communities

Further details are contained in case files.
