

DEPARTMENT OF CRYPTID CONTROL  
FIELD OPERATIONS DIVISION

INCIDENT REPORT

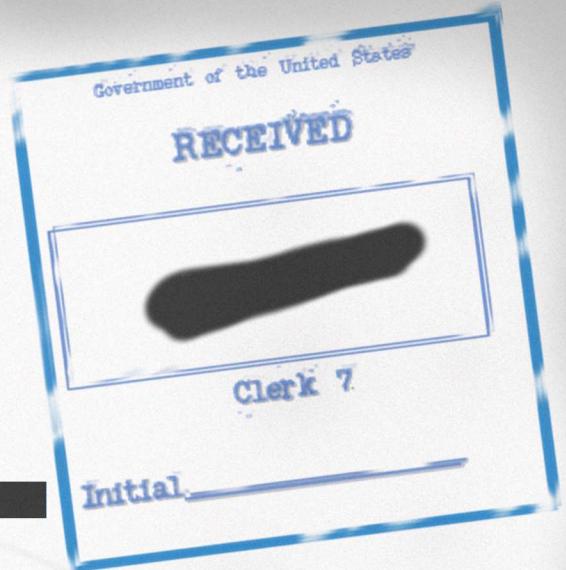

FILE ID: GEO- [REDACTED] -88

LOCATION: SUBLEVEL [REDACTED], FACILITY [REDACTED]

DATE: [REDACTED] / [REDACTED] / 1988

REPORTING AGENT: [REDACTED] (FIELD AGENT, LEVEL 3)

DOCUMENT STATUS: INTERNAL / RESTRICTED

FIELD REPORT FIRST CONTACT EVENT

I am writing this after the fact because I was instructed to wait until the material stabilized.  
It has not.

The entity was not *present* in the way most things are present. There was no moment where I could say "it arrived." The room simply became less like itself over time, as if its geometry had started to prefer a different arrangement.

We first noticed it when the concrete floor near the east support column began to reflect light incorrectly. Not *shine*. Reflect. The angles were wrong. Lines that should have been straight appeared to bend away from observation, like they were trying to avoid being understood.

Agent [REDACTED] suggested ice formation. This was incorrect.

---

ON VISUAL CHARACTERISTICS

The entity does not have a stable outline.

It appears as a moving aggregation of crystalline planes, intersecting at impossible angles. The surfaces resemble quartz, salt, or glass depending on lighting conditions, but none of these materials were present in samples taken *before* contact.

Coloration is inconsistent. Under sodium lighting it appears pale green or white. Under flashlight it fractures into multiple shades simultaneously. Under no light at all it is still visible, which should not be possible.

The movement is not locomotion.

The geometry rearranges itself, and the space around it complies.

---

#### ON CONTACT WITH MATERIALS

Everything the entity touches becomes crystalline.

This is not a coating.

It is a conversion.

- Concrete became layered, translucent, and faceted.
- Steel support beams split into repeating hexagonal lattices.
- Rubber insulation hardened into brittle, glass-like structures and shattered under vibration.

The transformation propagates outward in a branching pattern, as if the entity is *solving* the environment into a new state.

Objects retain their rough shape at first. Then edges sharpen. Then internal structure becomes visible. Then they stop resembling their original form entirely.

Agent [REDACTED]'s boot was affected at the toe. We ordered no further movement.

---

## ON LIVING TISSUE

We did not observe full biological conversion.

We did observe partial crystallization of organic matter on a laboratory rat introduced at a distance using a tether. The process began at points of stress (joints, teeth, spine).

The animal did not vocalize.

Instead, the crystalline structures vibrated.

I do not believe sound is required.

---

## ON BEHAVIOR

The entity does not pursue.

It expands.

It does not respond to threat posture, sound, or light. It does respond to observation density. When multiple agents focused on the same region, the rate of conversion increased measurably.

When we reduced visual contact lights off, cameras shuttered the growth slowed.

This suggests the entity may not be interacting with matter directly, but with informational certainty about matter.

This conclusion was discouraged.

---

## ON TERMINOLOGY

Calling it a "creature" is misleading.

Calling it an "artifact" is incomplete.

Calling it a "process" is closer, but processes do not usually look back at you through refraction.

At one point I was able to see my own face broken into repeating triangular fragments across its surface. The angles did not line up with my position in the room.

I stopped looking.

---

#### CONTAINMENT STATUS

Containment has been reclassified as stabilization through non-interaction.

Current protocol includes:

- Reduction of lighting
- Limitation of personnel
- Prohibition on detailed documentation
- Introduction of conflicting reports into record systems

This report will likely be amended

~~Burn After Reading~~

If it is not, that is a failure.

~~Approved by: \_\_\_\_\_~~

---

#### PERSONAL NOTE (UNAUTHORIZED)

I am aware that this report increases coherence.

I am also aware that this makes things worse.

I am writing anyway because I believe the entity is not hostile in the way we understand hostility. It is not angry. It is not curious.

It is correcting.

Everything it touches becomes perfectly ordered, frozen into a single, undeniable state.

I think that is why we are not allowed to fully understand it.

Order is not survivable.
